

Ticket 1: Received a ticket indicating that a recent update caused a conflict with an existing application. You are working on a fix for this problem, but in the meantime, you must undo the most recent update and temporarily pause automatic updates.

Task 1: Uninstall the most recent security updates for Microsoft Windows.

1.) Go to Windows Update

2.) Go to View Update History

- 3.) Click on Uninstall Updates and uninstall the most recent security update for Microsoft Windows

Task 2: Temporarily pause automatic updates for up to 35 days.

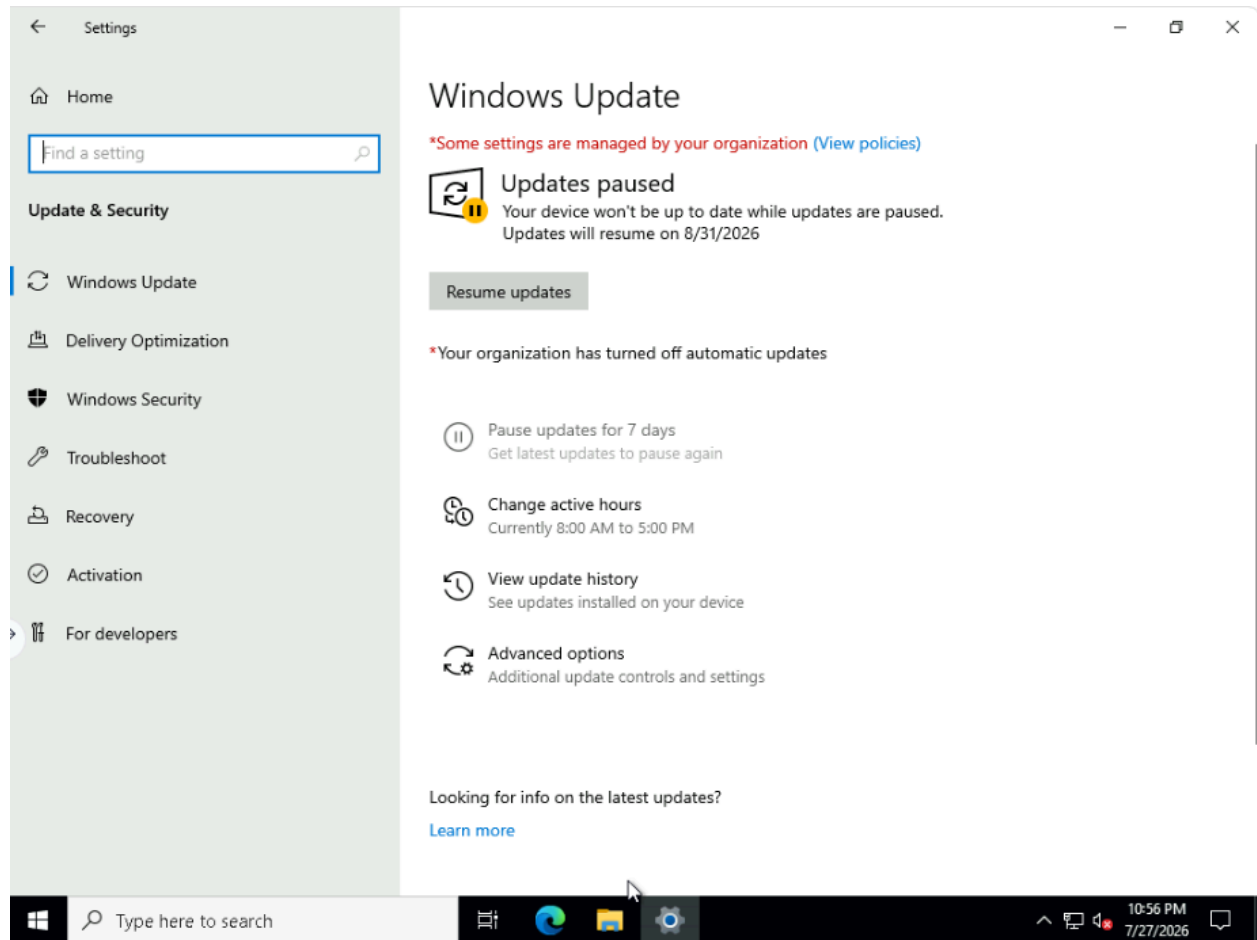

1.) Goes to Windows Update

- 2.) Click on Pause Updates and then go to Advanced Options and change the pause update day to the 35th day.

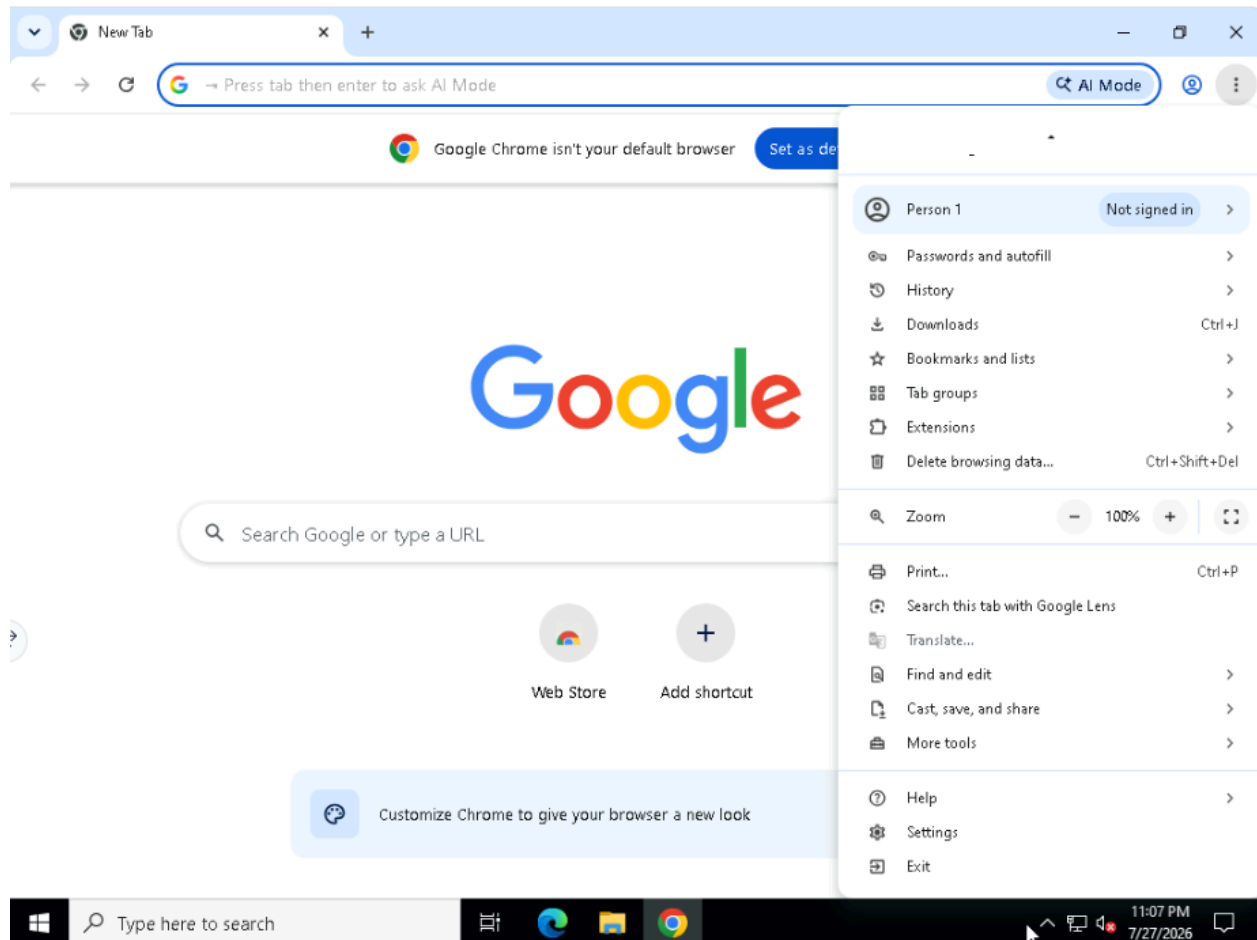

- 3.) Go back to Windows Update. Under Updates Paused, it will now say that updates will resume on 8/31/2026 (35 days later).

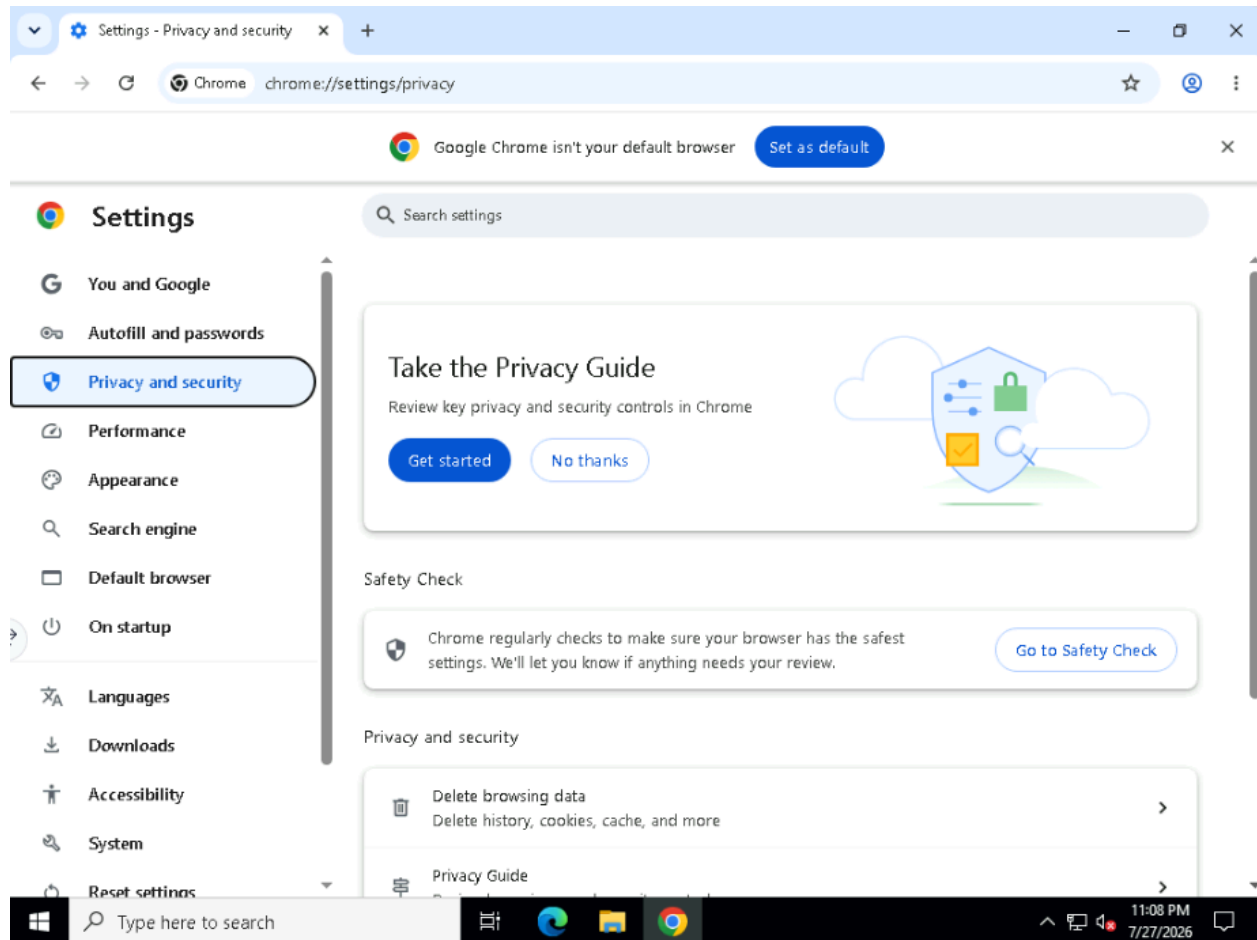

Ticket 2: A user is unable to access the most current version of a website. The issue may be related to the browser cache.

Task 3: Clear Chrome browsing history, cookies, site data, cached images, and files without losing the passwords and other sign-in data.

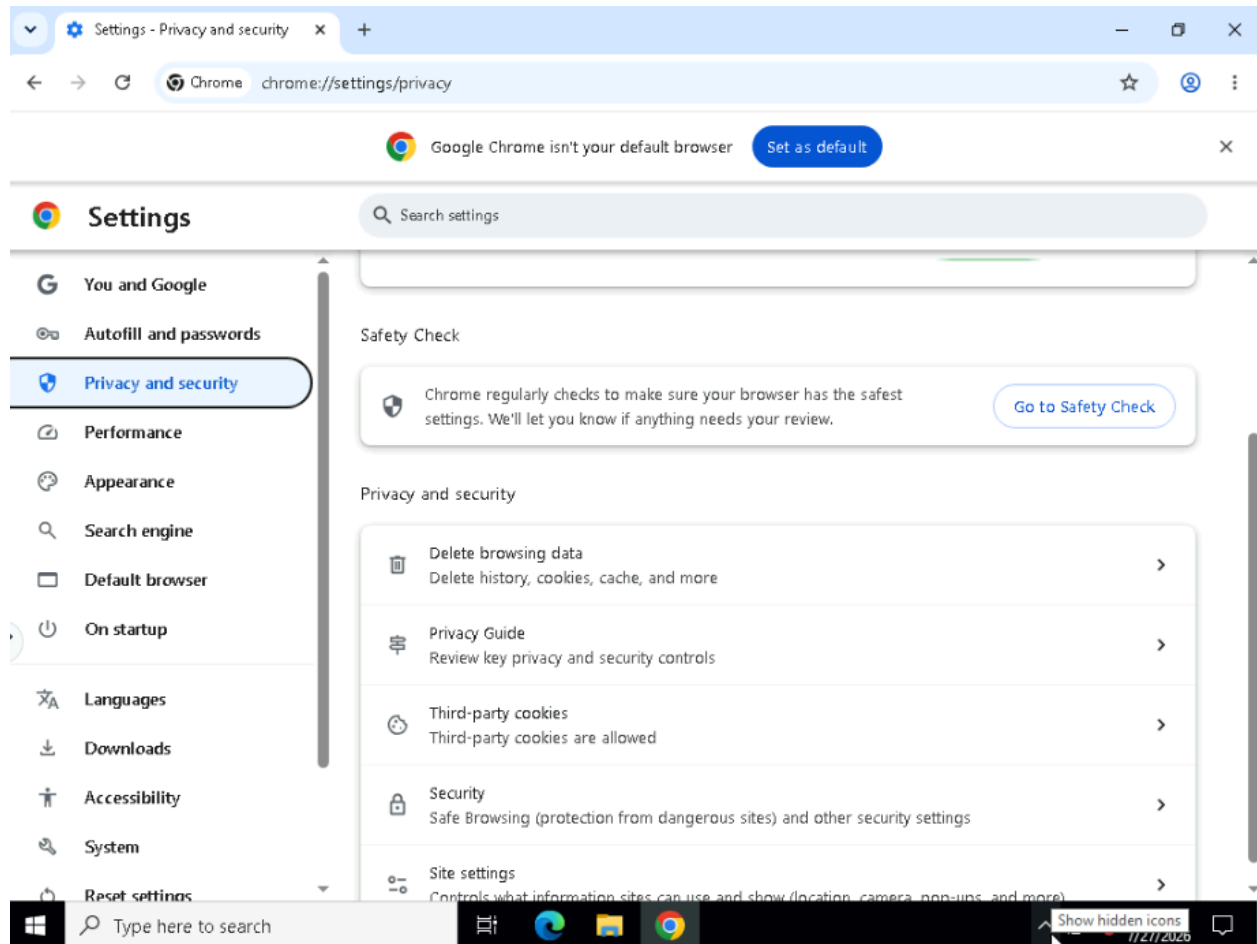

- 1.) Open Google chrome and click on the three dots. Then click settings.

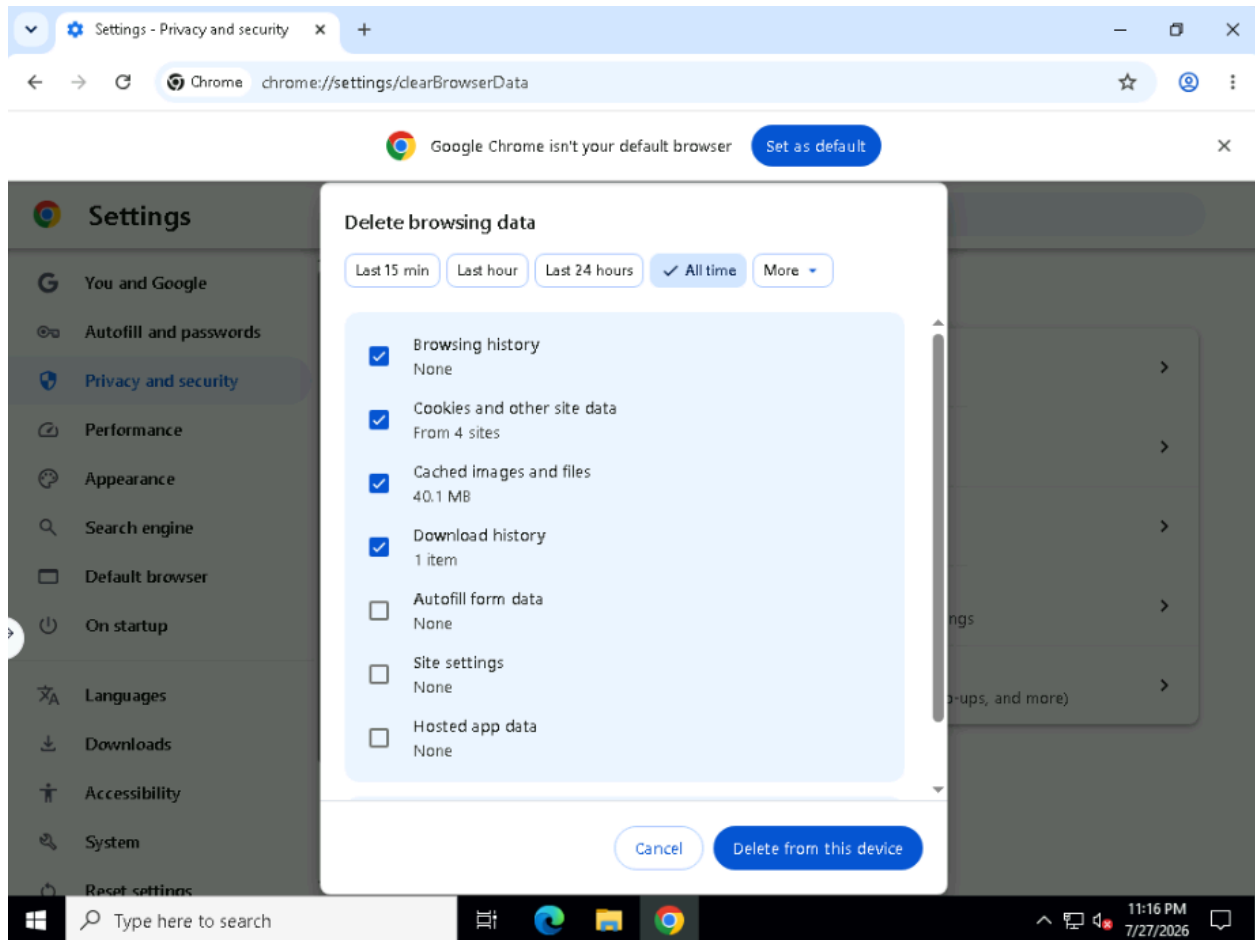

2.) Click on Privacy and Security

3.) Go to Delete Browsing Data

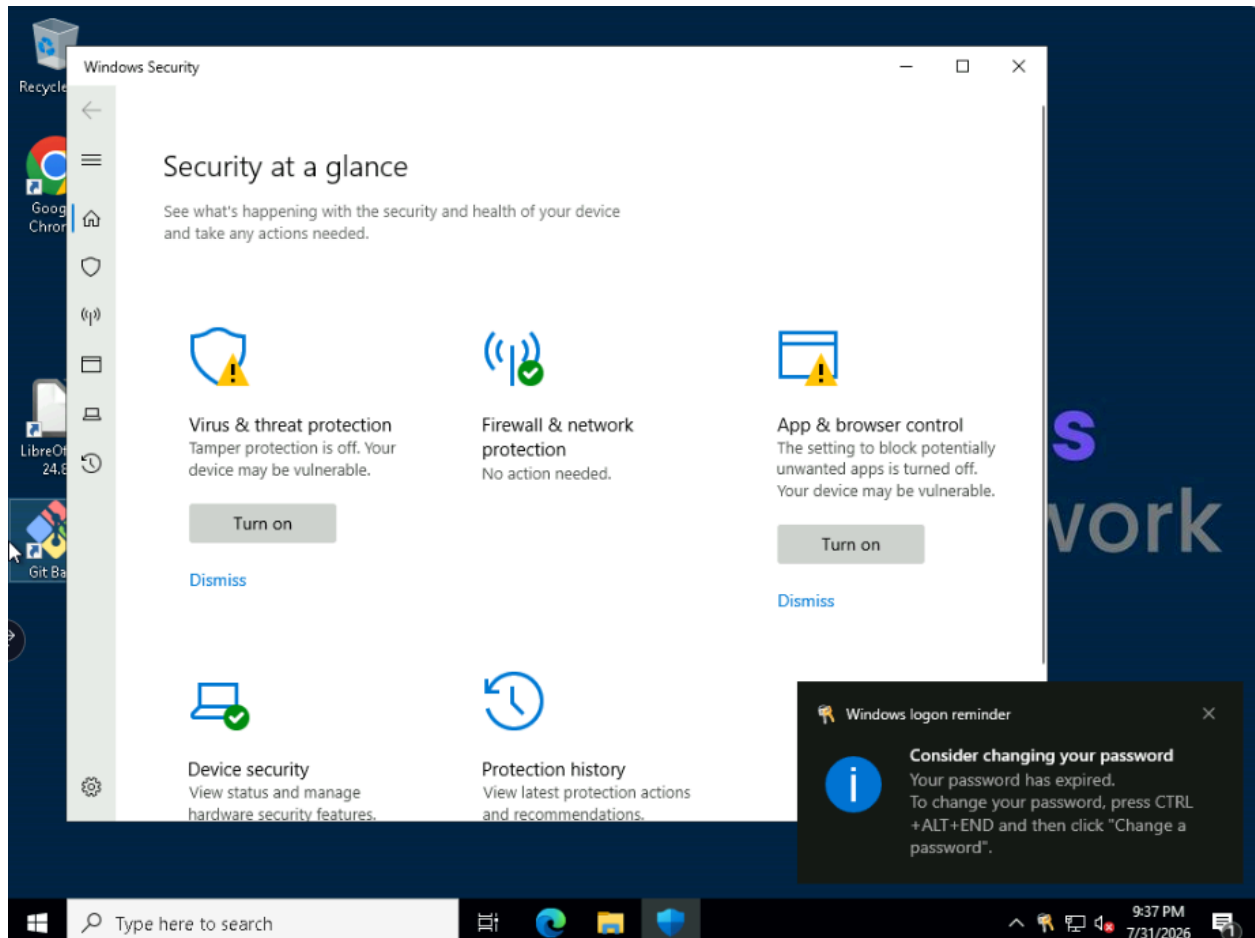

- 4.) Check Browsing History, cookies and other site data, cached image and files, and download history. Then click Delete from this device.

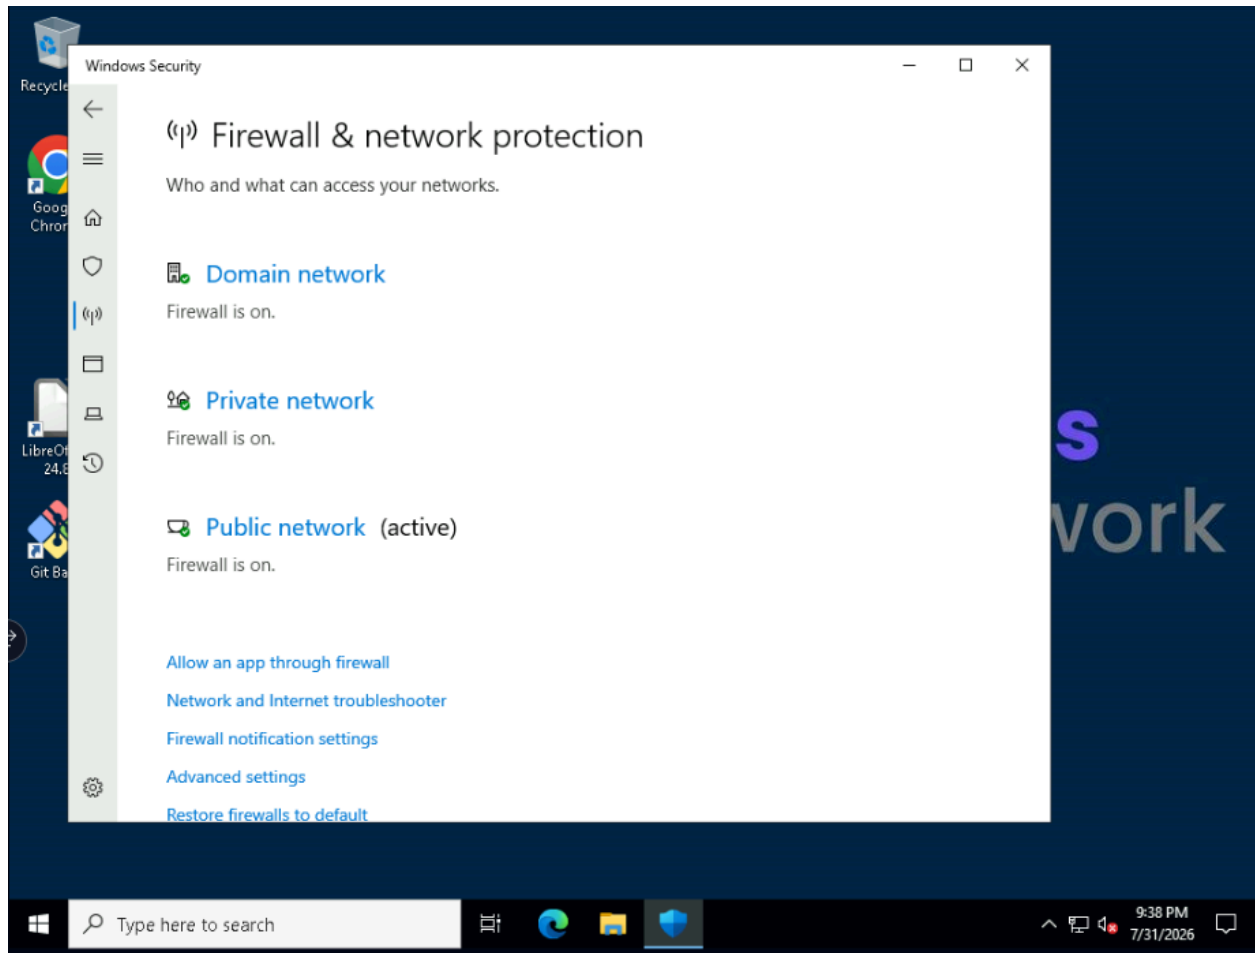

Ticket 3: Because of personalized security controls, a user has requested only to permit the Chrome browser access to the internet. To accomplish this task, ensure that the workstation enables Windows Defender Firewall, and that Google Chrome can communicate through the firewall. Also ensure that Firefox is blocked.

Task4: Enable Windows Firewall

1.) Go to Windows Security

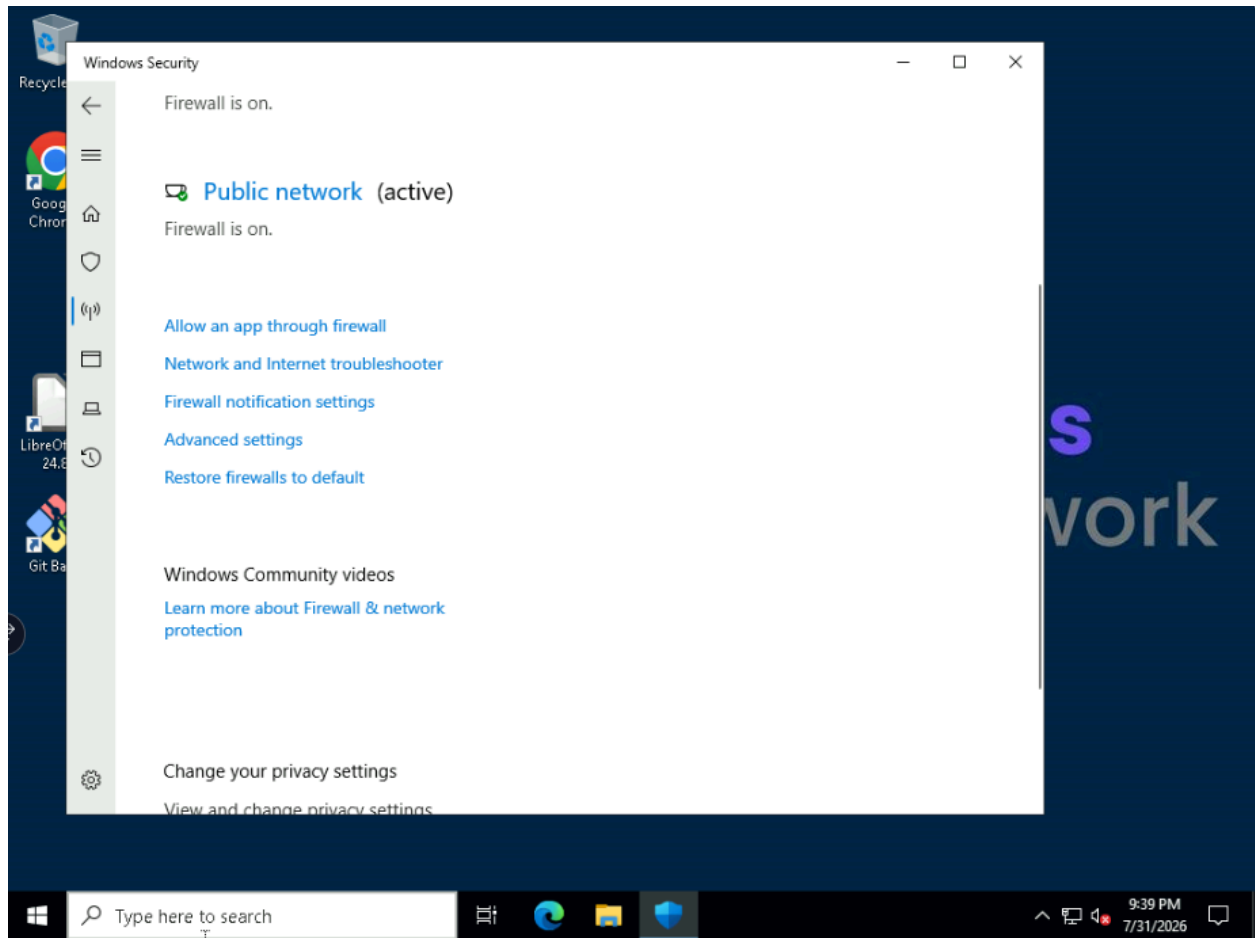

- 2.) Go to Firewall & Network Protection
 - a.) Make sure firewall is on for all networks

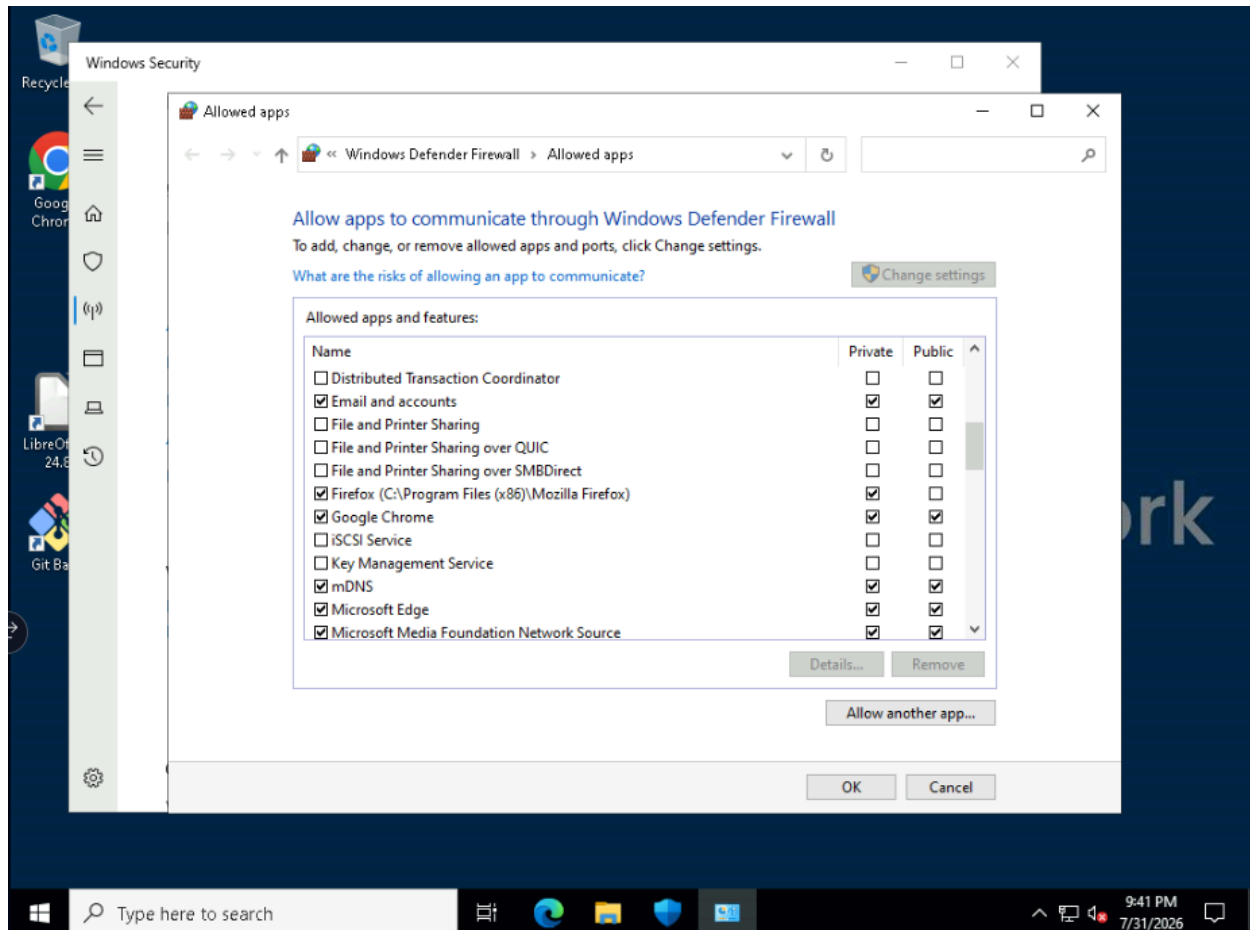

Task 5: Verify that Google Chrome is allowed to communicate through Windows Defender Firewall

- 1.) Click on allow an app through firewall

2.) Find Google Chrome on the list and ensure the click on the check box to allow it to communicate.

Task 6: Block Firefox from communicating through Microsoft Defender Firewall

1.) Uncheck Firefox on the allowed apps and features list
